Mn. Epston:-Through the kindness of several residents of these islands engaged in sugar manufacturing. The middle section is governed by the same principles as the first, as already intimated; and the third also, presents no important variations from the others in its operations.

The steam created in section third, is carried off by means of a condensor; the condensed steam also of the steam heating apartments of the middle and third sections, is likewise operated on in such a manner by a condensor as to regulate the atmospheric pressure of the section before it, from which it receives its steam.
